Faltron File Wiper

A simple utility that deletes files beyond the recovery of less sophisticated programs like the popular freeware PC Inspector File Recovery. You can drag and drop multiple files at once. It may or may not work with the NTFS file system. You can also use this tool to wipe the contents of the locked index.dat file. You should close other programs before using this tool for it to run faster. Do not use it on floppy disk as it will be very slow, use full format instead.
